PrestoInteractif

INTELLIGENT PARKMETER

A touch screen offers new functions

Besides the payment of hourly tickets, the PrestoInteractif's touch screen offers a municipality the option of introducing new, more sophisticated functions and differentiate its parking policy.

With an integrated touch screen keyboard, this intelligent parkmeter allows the virtualization of parking tickets through identification with the license plate number. It also allows the user to select discounts depending on his individual status, the type of vehicle or his journey based on alternative transportation means.

Connected with IEM's parking platform, the PrestoInteractif transmits every parking transaction and allows the user further functions such as the management of his parking transactions.

INNOVATIVE
PARKING
SOLUTIONS FOR
SMART CITIES

A modernization of the existing parking infrastructure

Equipped with a PrestoEuropa, every parking operator can upgrade to a PrestoInteractif thanks to its interchangeable payment system. The evolution of a parking policy or the upgrade to a most up to date technology can be done in shorter time at lower cost.

A new communication medium to interact with users

With its touch screen, the parkmeter PrestoInteractif offers a user friendly and modern user interface. It can be used as unique point of information. Its content is fully customizable and allows municipalities, to expand their distribution network for their news and all types of information.

APPLICATIONS

- Payments of hourly tickets
- Payment of short and long term subscriptions
- Payment of public transport tickets
- Management of privileges
- Management of stored values
- Applications of free parking time
- Enforcement of parking rotations
- Management of shopping vouchers
- Information kiosk
